

FLOWBACK TANKS

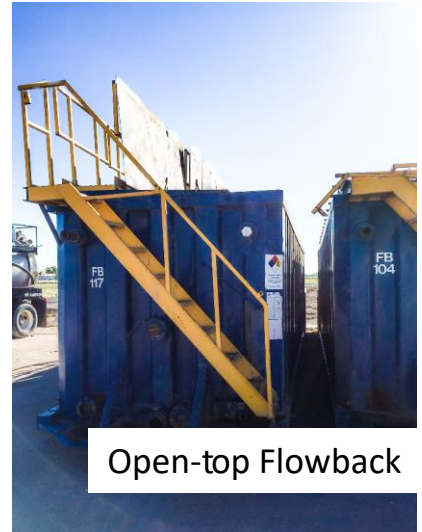

The DHI Standard Flowback Tank provides customers with a versatile easy and safe to use flowback tank.

Gas-busters are full length of the tank with 3" 1502 inlet connections.

Gas is vented when hatches are closed reducing on site emissions and fire risk.

The flowback tanks connect seamlessly with standard frac tanks for additional storage of fluids.

For green completions see the DHI Green Flowback Tank which boasts a fully captured gas component and comes in liquid phase separation option with internal weirs.

Characteristics:
