

# GREEN FRAC FLOWBACK TANK

The DHI Green Flowback Tank provides customers with a single stage solution tank that permits gaseous production or flowback fluid to knock out in an enclosed tank.

**Gas-buster inlet:** The inlet gas-buster diffuses the high speed flow of gas, oil, water, and solids entering the tank.

Gas is vented to a flare line or incineration system while fluids are dropped in the tank for circulation to storage tanks.

The tank is equipped with thief hatch pressure protection for both pressure up to 4 oz/sq in and vacuum when emptying.

Inlets are 3" 1502 connections on gas-busters.  
Tank inlets and outlets are 4" ANSI 150

## Characteristics:

- Positive pressure
- Gas vent line
- Water outlet
- Drain outlet
- Optional level indicators
- Pressure relief device

## Dimensions:

- Standard Frac Tank 53' x 8'6"
- Axle: Single
- Steel Construction
- Standard haul

## Benefits:

- Gas diversion to flare or exhaust location
- Easy to clean
- Water collection
